

# Trimble Modelogix Cloud has been upgraded

May 2017

Here are a few of the latest features which are now available:

## Archive Content

Say goodbye to the days where accidentally deleting a file or folder meant having to restore a copy of your database, or potentially losing that data forever. We've added a trash folder where all your deleted content is archived and can be restored in the event of an accidental deletion. Items in the trash will be retained for 30 days unless they are restored or permanently deleted prior to that time.

## Expanded Report Printing Options

We've enhanced our report printing options to support larger page sizes. This will allow you to fit more content on your reports, both when printing or creating a digital copy.

## Settings

## Performance Boost to the Cost Model Spreadsheet

Editing values in the cost model spreadsheet just got faster! It's clear that most users spend a lot of their time within cost model spreadsheet, so we focused on improving the performance and the overall experience. You should see a noticeable difference in the time it takes to edit values in a cost model.

# What's New in Modelogix Cloud 3.6

*Modelogix 3.6 - February 2016*

Modelogix Cloud was upgraded on January 30th, 2017. This release focused on team collaboration, extended permissions, and an upgraded project search experience. Specific feature details are below:

- **Extended Permissions & Roles Capabilities** - Are your Modelogix Administrators becoming overwhelmed with all of the project data you are looking to import? We've added a "Publisher" role to Modelogix, which allows others at the organization to help, without compromising your system security or the overall setup and configuration. Additionally, with a new assign project feature, projects can be assigned to other users in the system, so they can help fill out the details.
- **Improved Team Collaboration** - As a team member, want to know more about new content being added to your company's Modelogix system? With the new Modelogix activity digest email, you will receive updates when other users add content to your system, at a frequency of your choice.
- **A Better Project Search Experience** - We've upgraded our search map entirely to offer a more modernized experience.

# Introducing Trimble Modelogix Cloud

*Modelogix 3.5 - September 2016*

The new Trimble Modelogix Cloud modernizes the way Modelogix is deployed, accessed, and maintained. All the features you know and love from the classic product are also contained in the cloud product. We've just made everything easier, so you are no longer responsible for all the overhead associated with hosting and maintaining the data and infrastructure. With our cloud service, we take care of all of that for you.

Benefits include:

- **Dramatically simplified deployment of the software** - You sign up for your subscription, receive a link to download the application, and you're up and running.
- **A virtually maintenance free product** - Trimble maintains your data and the supporting infrastructure, you simply use the app.
- **Easier collaboration for distributed teams** - Citrix or remote desktop are no longer needed to access the software for geographically dispersed teams.
- **Automatic updates to the software** - Application is automatically updated when a new release is available.
